

PRODUCT OVERVIEW — MAAP

Modular Autonomous Aerial Platform

A next-generation, AI-enabled dual-use UAV platform designed for airport safety, infrastructure monitoring, and defense training applications — available for technology licensing and joint development partnerships.

THE OPPORTUNITY

Global demand for **high-speed, autonomous aerial platforms** across airport safety and defense training is accelerating — yet most solutions are either purpose-built silos or require significant runway infrastructure. GreenVue's MAAP is architected from the ground up as a **modular, runway-independent platform** with interchangeable payloads and software-defined mission modes — bridging civilian and defense applications from a single IP-protected architecture, powered by GreenVue's broader **Optical Intelligence Platform (OIP)**.

PLATFORM ARCHITECTURE

- Runway-Independent Launch
- Modular Payload Bay
- EO/IR Integration
- High-Altitude Ops
- AI-Assisted Vision
- Autonomous Navigation
- Software-Defined Modes
- Rapid Deployment

DUAL-USE APPLICATIONS

- ✈️ **Airport Safety & Bird-Strike Prevention**
Autonomous perimeter and runway safety operations; active deterrence and monitoring without requiring airstrip infrastructure.
- 🎯 **Defense Training & Target Simulation**
Recoverable aerial target platform for weapon system evaluation, tactical simulation, and strategic training scenarios.
- 🏢 **Critical Infrastructure Monitoring**
Modular payload adaptation for autonomous surveillance and inspection of large-scale assets and installations.

INTELLECTUAL PROPERTY POSITION

Patent filing in progress. IP covers the platform's modular UAV architecture, mission-adaptability framework, autonomous operational methodologies, and integrated optical intelligence workflows. Proprietary AI stack and flight control methodologies are protected and not disclosed in this document.

- Modular UAV Architecture
- Autonomous Mission Framework
- Dual-Use Configuration Logic
- Optical Intelligence Platform (OIP)
- Rapid-Deploy Launch Integration

DEV STATUS

Advanced concept & system architecture stage. Patent filing underway. Seeking co-development partner to jointly advance to prototype and production.

DEVELOPMENT ROADMAP

- | PHASE 1 — NOW | PHASE 2 | PHASE 3 | PHASE 4 |
|--|---|--|--|
| Architecture & Patent
System design finalization, IP filings, partner engagement | Prototype Development
CAD, simulation, subsystem prototyping & ground testing | Flight Testing
Structural, propulsion, altitude & endurance validation | Pilot Deployments
Airport + defense pilots, commercial production partners |

PARTNERSHIP & LICENSING MODELS

- Technology Licensing — IP access with royalty structure
- Joint Development Agreement — co-funded prototype to production
- Regional Manufacturing Partnership — licensed production rights
- Strategic Investment — equity stake aligned to commercialization

Ready to explore a joint development partnership?

Detailed technical specifications, IP architecture, and financial projections available under NDA.
