Putting Clinical Safety First

Forward Looking Statements

This presentation contains forward-looking statements within the meaning of the Securities Exchange Act of 1934 and the Securities Act of 1933, which are subject to risks and uncertainties. The forward-looking statements are based on information available to us as of the date of this presentation and our current expectations about future events, which are inherently subject to change and involve risks and uncertainties. You should not place undue reliance on these forward-looking statements. We undertake no obligation to update any of these statements for any reason.

Actual events or results may differ materially from those expressed or implied by statements made in this presentation due to various factors, the impact of any one or more might cause our operating results to vary widely. If our revenues, operating results or outlook fall below the expectations of investors, the market price of our Common Stock could decline substantially.

Investment Highlights

■ Market's First Fully Automatic, Self-Sheathing Safety Syringe

The only syringe with an automatic, spring-biased sheath providing continuous protection before, during, and after use—making it the only fully OSHA-compliant safety syringe.

■ Large, Mandated, and Under-Served Market Opportunity

The U.S. uses over 8B syringes annually, including 800M safety syringes, yet current safety devices remain inadequate. The self-sheathing segment is a \$1.5B+ 2025 market with strong OSHA-driven demand.

■ Proven Efficacy With 0% Failure Rate

IRB-supervised trials demonstrate near-100% efficacy and a 0% failure rate, outperforming all other safety syringes in the trial and supporting meaningful reduction of injuries and associated costs.

■ FDA 510(k) Cleared and Ready for Commercialization

Fully FDA-cleared following completed design, testing, and review. Validated for broad clinical use and designed for cost-efficient, scalable manufacturing.

■ Significant Clinical and Economic Need, With No Effective Alternatives

Over 1M needlestick injuries occur annually, resulting in tens of thousands of infections and nearly \$5B in avoidable costs. Existing devices require manual activation and fail to meet OSHA's self-sheathing requirement.

■ Strong Regulatory, Patent & Compliance Position

Protectus holds broad U.S. and international patent coverage and is the only syringe fully compliant with the OSHA Mandate—enabling true enforcement of federal self-sheathing requirements.

Protectus at a Glance

About Us

- Founded 2007; Minneapolis HQ
- **Mission:** eliminate needlestick injuries and reduce healthcare costs
- Led by industry veterans Kurtis Goos (CEO) & Dr. John Salstrom (CTO)
- **FDA-cleared**, patented, pre-commercial but fully scale-ready

What We Do

- Deliver the only fully automatic self-sheathing syringe
- Spring-biased activation deploys the safety sheath instantly
- No manual steps required to activate the safety feature
- Zero workflow disruption

Our Market Focus

- Hospitals, clinics, retail care, payer-provider systems, home-use markets
- Addresses gaps in OSHA compliance and clinical safety
- Expands into 200+ injection-based applications

Our Unique Edge

- Only syringe fully compliant with OSHA's self-sheathing mandate
- Clinically preferred in FDA trials
- Supported by a global ISO-certified manufacturer

The market's **first** fully automatic self-sheathing safety syringe

Our Mission is to Eliminate:

- ***Millions of accidental Needlestick Injuries*** in hospitals, clinics and home-use venues
- ***Tens of Thousands of cases of Bloodborne Diseases*** resulting from accidental needlesticks, e.g., AIDS, Hepatitis
- ***Hundreds of Deaths resulting from Bloodborne Diseases*** contracted through ***Needlestick Injuries***
- ***Billions of Dollars in Unnecessary Healthcare Costs*** for follow-up testing and treatment of disease

Putting Clinical Safety First

Problem

Accidental Needlestick Injuries Are a Major, Costly Failure

- 1M+ injuries annually; ~75% underreported
- Tens of thousands of accidental bloodborne infections
- >\$5B in avoidable costs
- \$3,000–\$15,000 per injury in follow-up testing
- Clinicians lose days to weeks of work

Current “Safety Syringes” Don’t Solve It

- Require manual activation (sliders, buttons, caps)
- Easily defeated or bypassed
- Still expose clinicians during/after use
- Despite decades of use, injuries remain high
- Devices fail to meet OSHA’s self-sheathing requirement (PL 106–430)

Solution

The Protectus Solution

■ Fully Automatic Protection

Provides full-cycle protection with no manual activation—sheath deploys instantly upon loss of control, protecting before, during, and after use.

■ OSHA–Compliant & FDA–Cleared

The only syringe fully compliant with OSHA’s self-sheathing mandate and is FDA 510(k) cleared following comparative clinical trials.

■ Eliminates Exposure & Re-Use

Automatically locks after withdrawal, preventing needle re-exposure, and contamination risk.

■ Clinically Preferred & Workflow Friendly

Clinicians preferred Protectus over Becton Dickinson in FDA testing, with no changes required to workflow or training.

Product & How It Works

A Next-Generation Automatic Safety Syringe

PRODUCT OVERVIEW

- FDA-cleared syringe with a patented spring-biased mechanism that protects the needle except under deliberate clinician control.
- Cost-efficient, manufacturing-ready design supporting scalable production and broad clinical adoption.

HOW IT WORKS

1. Control

The clinician's grip maintains intentional pressure, keeping the spring-biased sheath retracted.

2. Inject

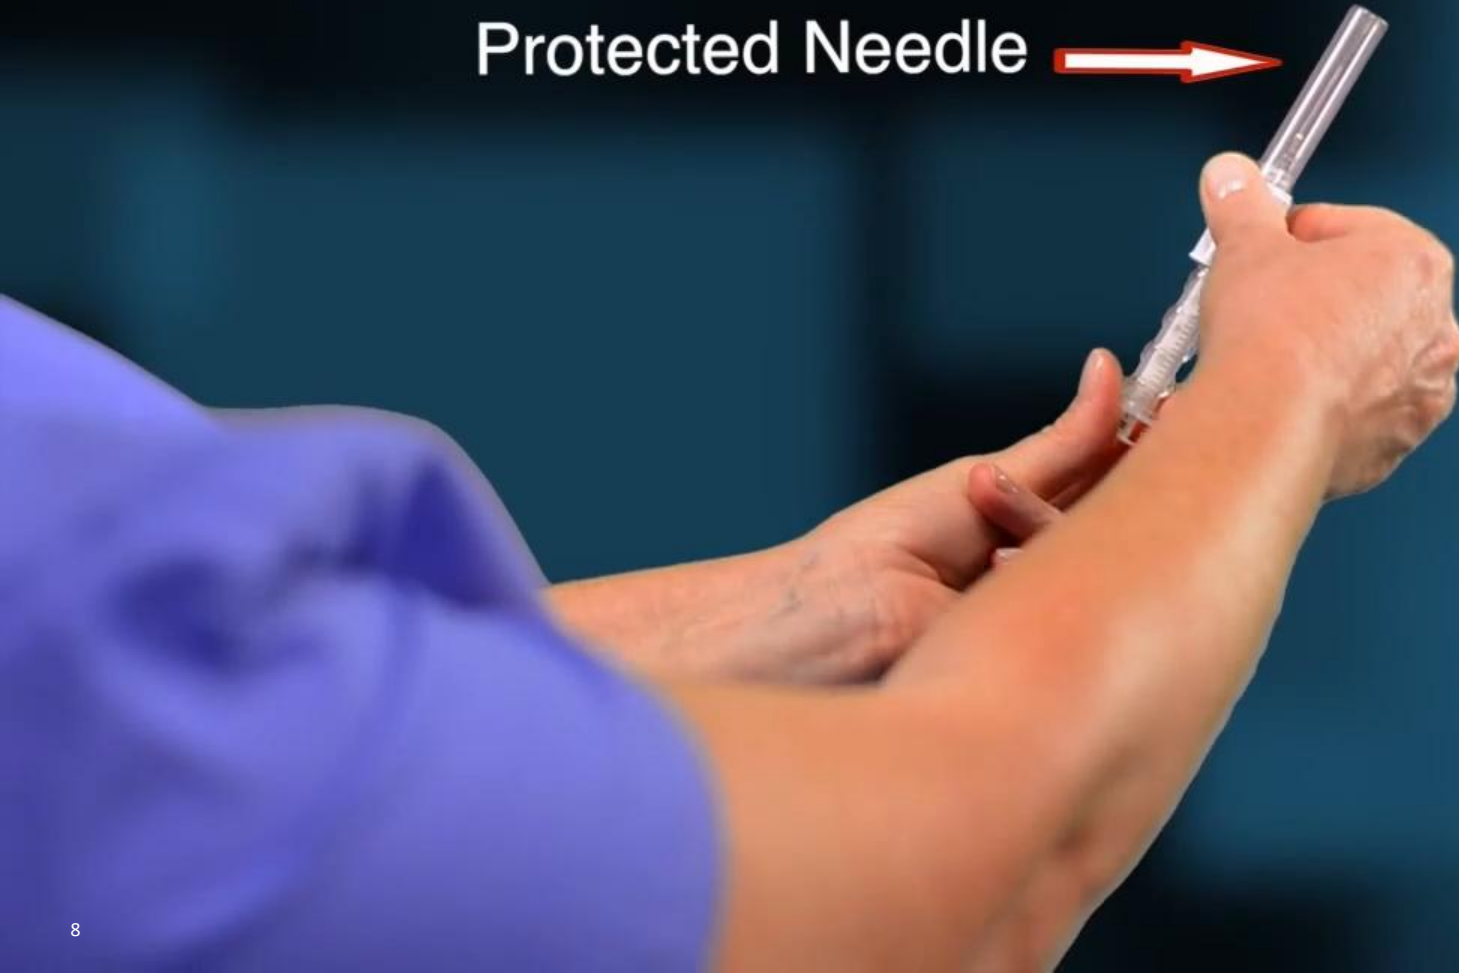

During the injection, the needle stays exposed only under deliberate control—no manual activation required.

3. Protect

When intentional control is released, the spring engages and the sheath deploys instantly and locks to prevent re-exposure or re-use.

Product & How It Works

Protected Needle →

Our Products

A comprehensive technology platform

Differentiated design:

- **Automatic, Self-Sheathing:** No conscious action required to activate sheath
- **Protection at all times before, during and after use**
 - ✓ Protective Sheath Deploys Immediately, Automatically
 - ✓ No “work-arounds” possible
 - ✓ No danger during transport to or from patient without recapping
 - ✓ *Permits* safe multiple, intermittent injections without recapping
- **Permanent Lock:** Prevents re-use
- **Easy to Use:** Designed around user input
- **Efficacious:** 0% Failure Rate in Clinical Trials
- **Cost-effective:** Priced below other ‘safety syringes’
- **FDA-Cleared:** Preferred device in Full Comparison Clinical Trials

Product Platform

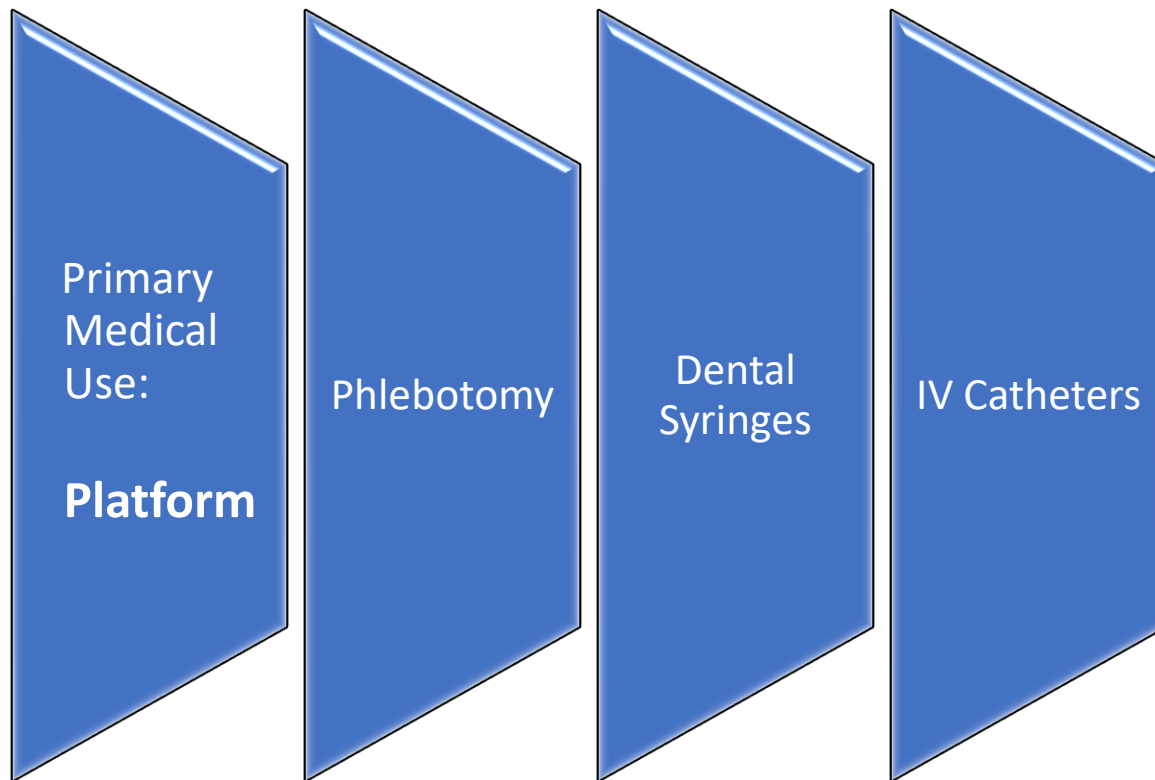

Protectus has developed an *Automatic, Self-Sheathing Safety Syringe* that dramatically *reduces Needlestick Injuries* in the healthcare workplace

- Patented Design
- FDA-Cleared
- OSHA-Mandated
- Cost-Effective
- Market Ready

Product Platform Pipeline

Building the Technology Platform that will be developed for additional key therapeutic areas and drive revenue growth

Tremendous Market Opportunity to diversify..... 200+ associated medical applications

Patented Technology

Global Patent Strategy by Application Use

USA: The Safety Syringe

International: The Safety Syringe

- Europe – 14 Countries
- Canada
- Australia
- South Africa
- Korea
- Taiwan

Other – Future Products:

- Safety IV Needle/Cannula Introducer – U.S.
- Safety Dental Syringe – U.S.
- Living Hinge Lock Collar – U.S.
- Safety Phlebotomy Device – Design/Specification (not yet filed)

- 1-The Safety Syringe – U.S. Patent No. 7,799,002
- 2-Safety IV Needle/Cannula Introducer – U.S. Patent No. 8,167,844 B2 (to be reissued)
- 3-Safety Dental Syringe – U.S. Patent No. 8,029,279 B2
- 4-Living Hinge Lock Collar – U.S. Patent No. D659,825 S
- 5-Europe – 14 Countries (2326372B1)

- 8-Republic South Africa (2011/01913)
- 9-Korea (1721705) 1387469
- 10-Taiwan (I387469B1)

Safety Syringes:

Why they are capturing attention in healthcare delivery

Needlestick injuries are *expensive & dangerous* problems critical to solve for hospitals, regulatory agencies and healthcare employees

- 1 Million reported needlestick injuries in the U.S. each year, *underreported by 75%*¹
- Tens of thousands of cases of bloodborne diseases are contracted each year from needlestick injuries in the healthcare workplace, e.g. Hepatitis, AIDS, etc.
- Over \$5B in *unnecessary* Healthcare Costs could be saved annually in the U.S.
- More than \$4.5B for *mandated* follow-up tests and monitoring
- Hundreds of millions in direct healthcare costs and lost time
- Higher insurance premiums

Nursing Community is Demanding Safer Options & Greater Protection

Federal Safety Legislation and Certification: OSHA Mandate and Enforcement – Market Opportunity

- Key Federal Legislation (PL 106-430), based largely on California AB 1208, spells out requirements unique to the Protectus syringe:
“Engineering Controls” shall include “safer needle devices....with engineered sharps injury protections...such as Self-sheathing Needles”
- OSHA has increased the budget and staffing in its enforcement division, stepping up pressure on healthcare facilities for compliance

The Protectus Safety Syringe is the *only* device that meets all Criteria of the Federal Legislation and the OSHA Mandate.

Key Market Insights

■ Large Established Market

- 8B+ syringes used annually in the U.S.
- 800M categorized as safety syringes

■ Economic Drivers

- Needlestick injuries cost >\$5B annually
- Rising pressure from insurers, OSHA regulators, unions, and Sharps Committees

■ Mandated But Unmet Need

- OSHA requires self-sheathing; no current product complies
- Creates a regulatory and clinical gap uniquely filled by Protectus

■ Global Opportunity

- IP coverage across major international markets

TAM/SAM/SOM Analysis

Total Addressable Market (TAM) - \$2.5B

U.S. Disposable Syringe Market

- Represents all disposable syringes used across hospitals, clinics, retail care, and home-use environments in the United States.

Serviceable Available Market (SAM) - \$1.6B

Safety Syringe Segment

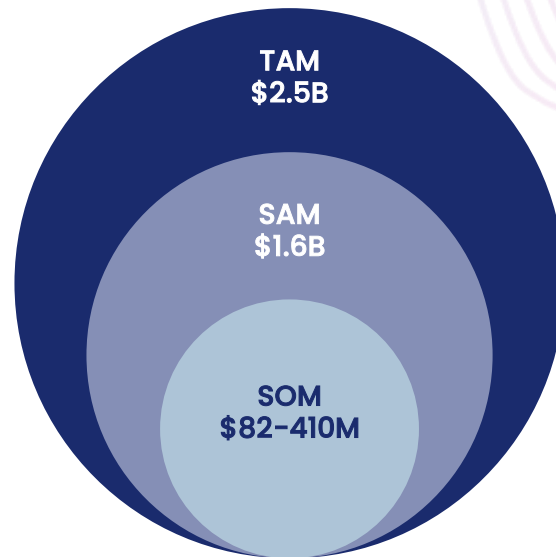

- Approximately 64.5% of U.S. syringe spend is on “safety syringes,” thus defining the Protectus’ immediate competitive category.

Serviceable Obtainable Market (SOM) - \$82-410M

Protectus Capture Opportunity

- Conservative penetration (5–10%) of the safety-syringe segment: \$82M–\$164M
- Accelerated penetration (20–25%) with OSHA-aligned adoption: \$328M–\$410M

Reflects Protectus’ unique position as the only fully OSHA-compliant, fully automatic self-sheathing syringe in a market still dependent on manual-activation devices.

Competitive Landscape

Comparisons

BD (Becton Dickinson)

Leader in traditional safety syringes with manual activation mechanisms (sliders, buttons).

Limitations: Requires user-activated safety steps; allows 'workarounds'; susceptible to failure; does not meet OSHA's self-sheathing mandate.

Cardinal / Covidien / Medline Safety Syringes

High-volume distributors offering conventional safety systems with caps, sliders or snap-on shields.

Limitations: Manual activation; exposes clinicians before and after use; no automatic mechanism; not self-sheathing.

RETRACTABLE
TECHNOLOGIES, INC.™

Retractable Technologies (RTI)

Produces manual retractable and shielding syringes designed to reduce injuries.

Limitations: Activation requires user action; safety feature can be overridden; inconsistent protection during use; not OSHA-compliant.

Niche & Regional Safety Syringe Manufacturers

Offer low-cost safety syringes with varying manual safety features.

Limitations: Limited clinical validation; inconsistent performance; no automated protection; no OSHA-aligned designs.

PROTECTUS'S EDGE

- Only fully automatic, OSHA-compliant self-sheathing syringe—no manual activation required.
- Validated 0% failure rate with clinician preference over BD in FDA testing.
- Delivers continuous protection with a permanent lockout to prevent re-exposure or re-use.
- Patented, manufacturing-ready platform extendable to IV, dental, and phlebotomy devices.

Competitive Landscape

Price Structures

COMPETITOR SYRINGE	RETAIL PRICE
BD Safety-Lok™	\$0.24-0.25
BD SafetyGlide™	\$0.63-0.66
BD Integra™	\$0.75-0.78
Cardinal Health Monoject™	\$0.24-0.25
Cardinal Health Magellan™	\$0.49-0.53
RT VanishPoint™	\$0.24-0.50
Terumo SurGuard® 3	\$0.28-0.60

Protectus Syringe:

\$0.48 US Retail Price

\$0.45 WE Retail Price

The Protectus Safety Syringe is *price-competitive* and *efficacious*!

Purchasing Analytics

Current 'safety syringes' are *more than twice the cost* of standard syringes... but *have not* significantly reduced Needlestick Injuries or associated Healthcare Costs.

The Protectus Syringe *will win* in the market:

Clinical trials have shown a failure rate of less than 0.1% - *near 100% efficacy*.

Market Introduction
of Protectus Syringe

*Reduced Costs of
Needlestick Injuries*

Business Model & Revenue Streams

PRIMARY REVENUE

Sale of single-use Protectus syringes to:

- Hospitals & IDNs
- Clinics & ambulatory centers
- Retail care networks
- Payer-provider systems
- Home-use and consumer injection markets

PRICING & MARGINS

- Competitive price point (~\$0.44), aligned with current safety syringes.
- Projected margin expansion from 50% → 78% as volume scales.

COST STRUCTURE

- Lean model with outsourced ISO-certified manufacturing.
- Scalable production in U.S. and low-cost international facilities.

PLATFORM EXPANSION REVENUE

Additional products leveraging Protectus' patented mechanism:

- IV catheter systems
- Dental syringes
- Phlebotomy devices

Go-To-Market Strategy

REGULATORY-DRIVEN ADOPTION

- Work with OSHA to highlight Protectus as the first viable, fully compliant self-sheathing syringe.
- Enables enforcement of existing federal law and accelerates institutional adoption.

SALES ENABLEMENT

- In-service training network supports product trials and conversions.
- Prioritize high-volume systems with strong safety-compliance pressure.

DISTRIBUTION DEVELOPMENT

- Active discussions with national retail and payer-provider networks, representing millions of patient encounters annually.

CLINICAL EVALUATION & TRAINING

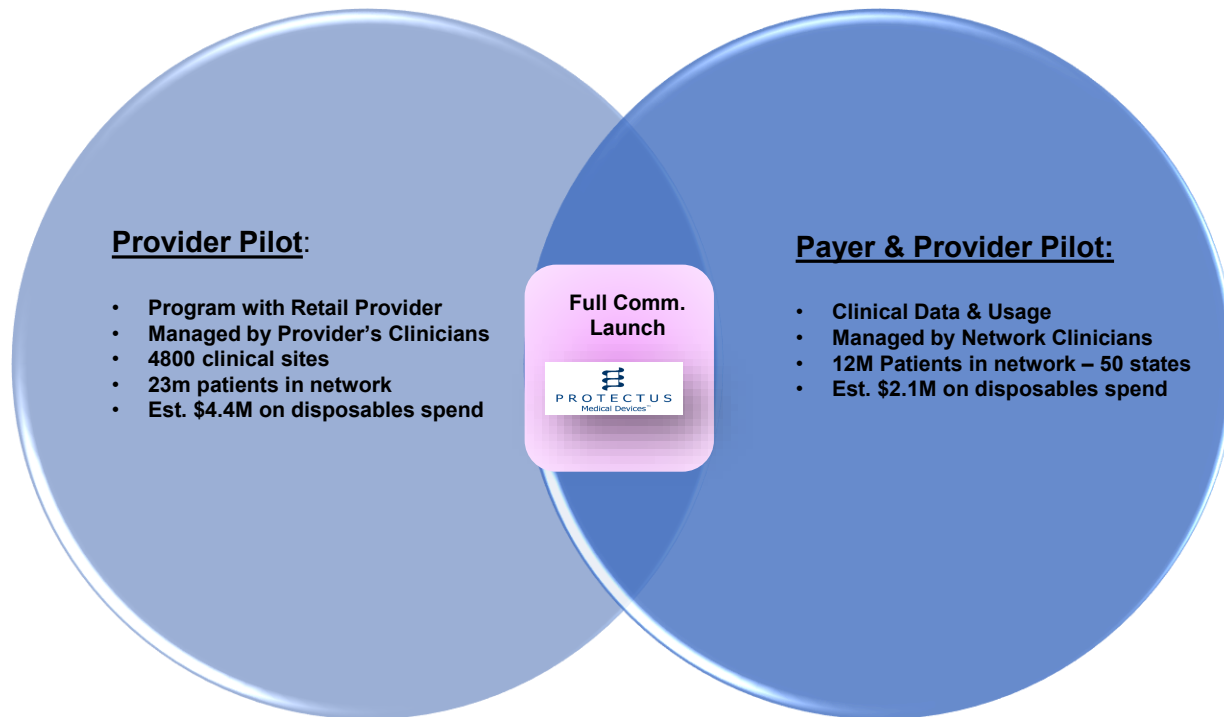

- Deploy evaluation programs across:
 - Hospitals & IDNs
 - Retail health chains
 - Clinical cooperatives
 - Government agencies
- Target Sharps Committees, Infection Control teams, and nursing schools and leadership.

FEDERAL CHANNELS

- Pursue GSA NIIS listing for immediate federal procurement eligibility.

Domestic Go-To-Market Strategy

A comprehensive channel strategy: First 12 months

Commercial Focus & Model

A comprehensive channel strategy: First 12-24 months

DTC

Model:

- Inside Sales
- Diabetic and Aesthetic Markets

B2B-Providers

Closed Network Providers

Model:

- Distributor(s) and Inside Sales
- Hospitals, ASC, IDN

B2B2C-Retail Based care

Retail based Care Providers

Model:

- Distributor(s) and Inside Sales
- ex: Kroger, Target, Walmart, Walgreens, CVS

National Distributors (US and Europe)

Distribution to Providers

Model:

- Distributor(s) and Inside Sales

Team & Leadership

Kurtis Goos, MBA

President & CEO

Kurtis Goos brings over 35 years of healthcare leadership and more than three decades of M&A and private-equity experience across global medical device organizations. He has led multiple successful startup exits and served in senior executive roles at Medtronic, St. Jude Medical/Abbott, Guidant/Boston Scientific, Carestream/Kodak Health, and LivaNova. His background spans commercialization, operational scale-up, regulatory strategy, and driving growth within high-performing medtech teams. With deep experience raising capital and guiding early-stage ventures to market, Kurtis leads Protectus' strategy, commercialization, and investor execution.

John Salstrom, Ph.D.

CTO & Chairman of Board

Dr. John Salstrom is a veteran biotech and medtech entrepreneur with more than 35 years of experience in medical device design, biotechnology, and technology architecture. An innovator and holder of multiple patents, he is the progenitor of the Protectus' fully automatic self-sheathing mechanism and the architect of the platform. John has founded and advanced several medical device technologies through design, engineering validation, and regulatory review. His background blends deep mechanical expertise with a strong understanding of clinical workflow, forming the technical foundation of Protectus' product leadership.

Our Team

Deep management, health care and device experience with a long history of success

Kurtis Goos, MBA

President & CEO

- Over 35 years in healthcare
- 30+ years M&A – Private Equity
- Successful start-up exits (3)
- Experience Senior Officer Level:
 - Medtronic
 - St. Jude Medical/Abbott
 - Guidant/Boston Scientific
 - Carestream/Kodak Health
 - LivaNova

John Salstrom, PhD

Chairman & CTO

- Over 35 years in medtech & biotech
- Entrepreneur & Innovator
- Technology Developer & Architect
- Multiple patents in medtech & biotech

Tim Musara, MBA

CFO

- Over 20 years in finance
- Start-up to Large Cap
- Director and Senior Level Experience
- Private and Public company experience

- Raising **\$25M**, to accelerate commercialization, manufacturing and scale
- \$155K committed to date; **\$2.1M raised** historically, including ~\$500K from leadership.

Use of Funds

45% — Technology & Product Development

30% — Commercial Expansion

25% — Manufacturing & Operations

Potential Exit Pathways

■ 1. Strategic Acquisition by Major Medtech Companies

Protectus' FDA-cleared, fully automatic self-sheathing technology fills a critical regulatory and clinical gap that no incumbent currently addresses. Large syringe and safety-device manufacturers face increasing OSHA-driven pressure to offer compliant solutions. Protectus' patented mechanism, proven clinical performance, and scalable manufacturing make it an attractive acquisition target for companies seeking portfolio differentiation and regulatory alignment.

■ 2. Licensing of Patented Automatic-Sheathing Technology

Protectus holds a broad U.S. and international patent estate covering its automatic self-sheathing mechanism. This enables licensing opportunities to established medtech companies requiring OSHA-compliant technology for their syringe or injection platforms. Licensing creates non-dilutive revenue potential while expanding Protectus' presence across multiple product categories.

■ 3. Standalone Growth Into a Multi-Product Safety Platform

Beyond the core syringe, Protectus' patented mechanism is applicable to IV catheter systems, dental syringes, and phlebotomy devices—each addressing large, recurring-use markets with similar safety challenges. Successfully commercializing this expanded platform positions Protectus as a scalable, long-term independent safety-technology company with a defensible competitive moat and strong recurring revenue characteristics.

Progress & Milestone Achievement: Our Scorecard

We have made great progress with more to come over the next 12 to 24 months

- ✓ **Completed:** Design Only Self-Sheathing Safety Syringe
- ✓ **Conducted:** Full-Comparison Clinical Trials for FDA
- ✓ **Obtained:** FDA Clearance for Protectus Safety Syringe [510(k)]
- ✓ **Affirmed:** Full Compliance with Federal Law and OSHA Mandate
- ✓ **Obtained:** Patent Protection – Domestic & International
- ✓ **Retained:** Key Personnel – Industry Experts
- ✓ **Retained:** Third-Party Manufacturer – Competitive & Confirmed
- ✓ **Retained:** Legal, Accounting & Audit Team
- ✓ **Product Pipeline:** Additional Products and Global Markets

In Summary :

The Protectus Medical Products are Market-Ready!

- ✓ ***Large Addressable Market – Mature***
- ✓ ***OSHA-Mandated Market Potential – Public Law 106-430***
- ✓ ***Rapid Growth & Profitability Potential***
- ✓ ***Proper Funding is Key to Our Success!***

Key Differentiators

- The ONLY Fully Self-Sheathing Syringe
- The ONLY syringe to meet the OSHA mandates
- No “workarounds” for gold-standard safety
- Does not require additional steps compared to competitors
- Strong acceptance in clinical trials by clinicians
