Asset Overview

Location Analysis

Market Overview

2

Location Analysis

The Best of the Best

- Tiffany Ginza is located just a block away from the main intersection of Chuo-dori, standing prominently on the corner of Chuo-dori and Miyuki-dori
- This area on Chuo-dori between Ginza 7-chome and Ginza 2-chome has the highest concentration of foot traffic in the submarket and is a mecca for luxury shopping
- At 57 meters, Tiffany Ginza has the largest frontage of any luxury retail brand located along this central strip and therefore would be one of, if not the most, coveted locations for a luxury brand in all of Japan
- Acquisition opportunities in this location and at this scale, particularly for overseas buyers, are largely unheard of

Luxury Retail Assets along Chuo-dori, Ginza

3

Market Overview

Prime Retail Market Characteristics

Dominant Ownership by domestic Investors such as:

- Blue-chip real estate developers
- J-REITs and Private REITs
- Corporates including owner occupiers
 - These entities typically pursue long-term hold strategies, limiting market liquidity for prime assets

Low Transaction Volume

- Prime retail assets rarely transact due to long-term ownership structures
- When sales occur, they are often:
 - Off-market via private, invitation-only processes
 - Directly negotiated between known parties

Relationship-Driven Sourcing Environment

- Deep, trusted networks are essential to access opportunities
- Negotiations are lengthy and require strong credibility and local presence

Fragmented Land Ownership Due to Historical Factors

- Tokyo's land ownership reflects Japan's feudal history, resulting in many small, irregular land plots
- Large, contiguous sites are rare and tightly held, and commonly managed under multi-generational business plans

Central Tokyo – Retail Submarkets Overview

- Tokyo is home to renowned retail districts such as Ginza, Omotesando, Shinjuku, and Shibuya. These areas are coveted by global brands for sales and marketing purposes as they have a strong reputation as prime locations. Marunouchi, Roppongi, and Ikebukuro also attract many shoppers and various brands have stores in these areas.
- Asking rents for 1F units in Tokyo increased by 3.0% HoH. Similarly, non-1F asking rents grew by 4.3% HoH. Vacancies, especially those in non-1F units continue to improve.
- That said, there is considerable disparity between prime and subprime locations, even in popular submarkets, with vacancies visible in the latter.

Central Tokyo – Retail Submarkets Overview

Source JREI, BAC Urban Projects, Savills Research & Consultancy

Source JREI, BAC Urban Projects, Savills Research & Consultancy

- **Ginza:** Prime streets (5-chome, 6-chome) command the highest rents, with limited supply and strong inbound demand expected to push rents higher
- **Omotesando:** Non-1F rents remain Tokyo's most expensive; vacancies are scarce, supported by a strong luxury presence and Harajuku's youth-driven retail mix
- **Shinjuku:** Strong inbound demand and ongoing redevelopment (e.g. Odakyu site, new pedestrian route) reinforce its outlook as a vibrant retail and entertainment hub
- **Shibuya:** As a cultural hotspot with heavy foot traffic and limited supply, Shibuya continues to attract diverse retailers and sustain elevated rent levels

Land Price Development (Chika Koji)

- Prime retail frontline:** Land prices along Chuo-dori are significantly higher than in nearby backstreets such as 6-8-3 Ginza.
- Similar trend patterns:** Despite the price gap, all locations have shown parallel price movements over the last decade.
- Pandemic impact:** Temporary decline in 2021-2022 as retail assets were most affected by COVID-19.
- Strong recovery:** Prices have since rebounded, with 2025 values approaching or exceeding pre-pandemic levels.
- Long-term growth:** Average land prices have roughly doubled since 2015, reflecting Ginza's sustained position as Japan's leading luxury retail hub.
- Market drivers:** Recovery supported by inbound tourism, luxury spending rebound, and limited prime site availability.

Historic Currency Exchange Rates

Source Macrotrends, based on historical FX data
*2025 represents the YTD average to October 21, 2025

- From 1996 to 2025, the yen has averaged 113 per 1 US dollar. In 2024 and 2025, the yen traded well above this level in the 140-160 per USD range.
- While there is no consensus on where the USD / JPY exchange rate will stand going forward, top global real estate investment managers, including Blackstone, take the view that the yen will strengthen in the short-term and continue to invest in Japan under this thesis, in addition to attractive local fundamentals.
- Given that 100 yen is similar to 1 USD in terms of local purchasing power, it is a common psychological benchmark for local residents when evaluating the yen's relative strength or weakness.
- Considering that in 2024 and 2025, the yen has hovered roughly 50% higher than this threshold, we would expect local political pressure to mount if the yen were to weaken any further, with some signs of this already emerging in recent political discourse.

2.Important matters that may influence clients' judgement according to the scope of Financial Instruments Business services

About our fees:

Savills handles and offers a broad range of instruments and services. Therefore, we are unable to specify the amounts or calculation methods pertaining to our fees in advance. We would like you to review and confirm our fees by reviewing all the documents and disclosures we provided in advance before concluding a contract.

Client risk and possibility of loss:

The instruments handled by Savills (securities such as real estate trust beneficial interest and equity interests in silent partnerships) may result in losses due to fluctuations in the prices of the subject real estate, rent, and interest rates. You may also incur losses due to damage on the subject real estate caused by extraordinary natural disasters or large-scale natural disasters, amendments to relevant laws and ordinances, increased tax burdens due to tax reform, etc. Additionally, the risk of loss may present either directly or indirectly, due to contractual terms or the design of the instruments involved. As Savills does not provide a guarantee on the principal or yield, all the risks related to the decline of the investment value will be borne by the client. We would like you to review and confirm the risks associated with individual instruments by reviewing all the documents and disclosures we provide in advance.

When concluding contracts with Savills:

If you plan to enter into any Financial Instruments and Exchange contract with Savills, please carefully read and examine all the documents and disclosures in advance before concluding a contract.
